DESIGN THINKING PROCESS

Stanford d.school 5-phase methodology applied to Campus Connect

01 Empathize

- Conducted surveys with 50+ college students
- Identified key pain: events scattered across WhatsApp, notice boards, email
- Students miss deadlines due to lack of centralized alerts
- Persona created: Arjun Kumar, 20, CS student

02 Define

- Problem statement: Students need a unified platform to discover, register and track campus events
- H0: How might we reduce missed event registrations by 80%?
- Core jobs-to-be-done: Discover + Register + Reminder + Track
- Scope: Public-first, college-specific, lightweight

03 Ideate

- Brainstormed 25+ features via affinity mapping
- Prioritized: Event discovery, one-tap registration, push reminders
- Rejected: Social feed (scope creep), AR maps (complex), gamification (distraction)
- Finalized 9-screen core flow with bottom navigation

04 Prototype

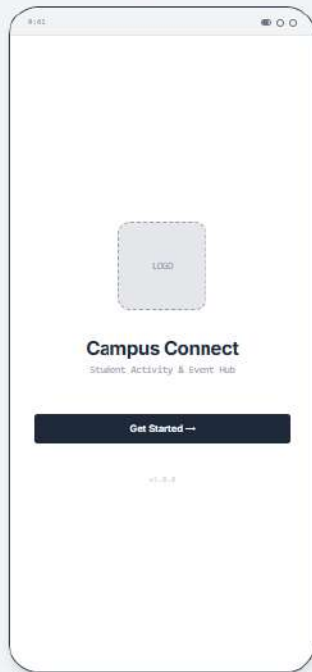

- Created paper sketches + digital hi-fi wireframes (this document)
- 9 screens covering complete user journey
- Grayscale only - focusing on layout & information architecture
- Navigation flows documented with labeled arrows

05 Test

- Plan: 5 usability tests with target users (CS students, 18-22)
- Tasks: Find event, register, check confirmation, view notifications
- Metrics: Task completion rate, time-on-task, error rate
- Iterate: Refine based on feedback before hi-fi prototype
